

Git Hands-On Lab 2 — Solution

```
cd GitDemo

echo "sample log entry" > app.log
mkdir log
echo "another log entry" > log/debug.log

git status

notepad++ .gitignore
```

Add to `.gitignore`:

```
*.log
log/
```

```
git status
git status --ignored

git add .gitignore
git commit -m "Add .gitignore to exclude .log files and log folder"
git push origin master
```
